

### Wabtec Electronic Train Management Cables

The Wabtec Electronic Train Management System serves as the key enabler for Positive Train Control on most Locomotives in North America. The ETMS integrates with legacy train control systems to prevent track authority, speed limit and unauthorized work zone entry violations, minimizing the potential for a train accident.

Maintaining the cabling to the TMS is critical for proper operation. Supply chain disruptions and rising prices are everywhere, and it has certainly hit cabling for locomotives. As the preferred supplier of Ethernet, Power and Antenna cables to a Class I railroad, we have been in the middle of trying to keep costs in line and deliveries flowing. Our current volumes with material and component suppliers may put us in a position to help ensure you can get the cables you need at a reasonable price.

Contact ACS-RS for a no obligation quote to see if we can reduce you costs and/or improve you deliveries on these essential cables.

	Description	ACS-RS Part #
	<b>TMS POWER CABLE</b> Ref # 26832P, 5POS PWR CONN to RING LUG 2EA 1C 14AWG 2w/EXPANDO SLEEVE	<b>30133.XXX</b>
	<b>TMS ETHERNET CABLE</b> M12/M12 MALE 8 PIN A CODE 4PR 24AWG SOLID SHLD, CAT5 PVC ASSY	<b>28467-1.XXX</b>
	<b>GARMIN GPS ANTENNA ASSY</b> ALUMINUM MOUNTING PLATE 6POS MALE CIRC CONN 48" CABLE TAIL	<b>30059</b>

.xxx represents the length of the cable in feet
